

## **Aidan Kearney**

I am Aidan, I have an extremely rare and aggressive bone wastage disease.

Before being involved in a research trial my quality of life was poor, there was no hope and nothing but bad news.

After being involved in a clinical trial my life has changed massively, I am fitter, stronger and healthier than ever before in my life. Being involved has given me a far better quality of life that I could of only dreamed of, I used to worry about the future and how fast I was deteriorating. Not now the future is bright and I have hope which I never had before.

Research did not just change my life it saved my life.
