

# ReFLECTS Mirror Box Therapy with sub-acute Stroke patients

Stroke can result in loss of movement to one side of the body which can make everyday tasks difficult. To help regain movement, this CHITIN trial will explore if using upper limb Mirror Box Therapy (MBT) will help recovery of an affected arm alongside existing Occupational Therapy input.

The CHITIN project has received €8.84m from the EU's INTERREG VA Programme, which is managed by the Special EU Programmes Body (SEUPB).
