

YOUR QUESTIONS

What sort of research could I be volunteering for?

'Join dementia research' is designed to match people to appropriate research studies using your personal information. Current research ranges from clinical studies of new treatments to surveys about what works in improving quality of life for people with dementia and their carers.

Who can register with 'Join dementia research'?

Anyone, with or without dementia, can register their interest as a volunteer. Volunteers must be over 18 years old. You can also sign up someone else, providing you have their consent.

How will registering benefit me?

- 'Join dementia research' will help you learn more about dementia research in your local area or nationally.
- It is an easy way to let researchers know that you would like to take part in a study.
- Registering gets you a step closer to taking part in a study. If you do take part in a study, you will have the satisfaction of knowing you could contribute to future insights into dementia and its causes as well as early diagnosis, better treatment, and quality of care.

By registering, am I committing myself to research?

No. Once you have registered your interest, your details will be regularly checked against appropriate studies. If a match is found, you will then be contacted in your preferred manner (by phone, email or letter).

Information about the study will be provided to you by the research team of that study, and you will have the opportunity to ask the researchers as many questions as you like before deciding whether or not to take part.

national service
connecting you to the
latest dementia research**

**Vital studies into early
diagnosis, prevention and new
treatments for dementia are
making progress – that's why
more volunteers are needed.**

How can I get involved?

'Join dementia research' is a new service which allows people to register their interest in national dementia research. It helps people with dementia, their carers, or anyone interested in dementia research to be matched to studies. Signing up could make a real difference to you and others.

Nigel and Chantel's story

Chantel and Nigel have been married for 32 years. Nigel was a bus driver for 30 years when he started to have problems with numbers and counting. This is when Chantel realised that there might be something wrong.

Nigel was diagnosed with Familial Alzheimer's Disease in 2009. It was during one of their visits to the hospital that their doctor asked if they would be interested in taking part in research exploring the genetic causes of the condition.

"I can truly say that being involved in research changed our lives as we felt we had much more of an understanding of the disease, and the research team were able to support us all the way through. It's amazing what goes on behind the scenes."

It helped Nigel gain peace of mind knowing that he will be able to contribute to the improvement of diagnosis and treatment of the disease for future generations."

Chantel
